Learn Airplane Parts and Functions

Hold Things Together - Carry Payload

Learn more vocabulary:

- Pitch The rotation of the airplane around a left-to-right axis (think of the airplane nodding up and down)
- **Drag** The force that resists movment of an aircraft through the air (this force can be used to push the airplane upward)
- **Thrust** A force that moves an airplane in the direction of the motion (created by the propellors or engines)
- Lift The upward force on the wings that opposes the weight of the airplane (this keeps the plane in the air)
- Roll The rotation of the airplane around itself (think of the airplane twisting)
- Yaw The rotation of the airplane around an up-and-down axis (think of the airplane turning left and right like a car)
