

# Draw Wetland Wildlife

Wetlands are areas such as lakes, rivers, streams, ponds, and marshes. These areas have very important purposes such as preventing flooding, cleaning our water supplies, and habitats for animals. Animals that live here include beavers, ducks, bog turtles, herons, frogs, salamanders, bears, ducks, cattails, blueberries, skunk cabbage, winterberry, and more. In the picture below, draw in some of the animals that live in wetlands!
